This volume presents 13 chapters that have been compiled for a course on the history of American constitutionalism. Every chapter is a thorough review of a substantive area of American constitutional history, and each chapter begins with a detailed description of the history of the issue, including the constitutional debates that produced the final, enduring framework. Taking a broad, interdisciplinary approach, this book examines constitutional issues, both during the imperial and at the end of the nineteenth century, and at the beginning of the twentieth century. It pays special attention to constitutional developments in the field of education, examines the relationship between constitutionalism and nationalism, and examines the impact of constitutionalism on the state. The authors describe the situation as it developed in England and the United States during the nineteenth and early twentieth centuries, comparing the structure of the state, the relation between the state and civil society, the structure of the legal system, and the implementation of the Constitution in these two countries. The fourteen essays in this volume comprise a thematic collection, focusing on the relationship between the federal government and the states. The individual chapters investigate a range of issues, including federalism and statehood, the Constitution's interstate compact clause, the creation of the federal government, the militia, and the interstate compact.
